Medicare Rates and CPT Codes - Updated January 2016

Women's Wellness Connection clinical services

Reimbursable Services and Procedures for January 1, 2016- June 29, 2016

Listed below are allowable procedures and the corresponding CPT codes for use in the Women's Wellness Connection Clinical Services program. These rates are based on information found on the Centers for Medicare and Medicaid website, https://www.cms.gov/apps/physician-fee-schedule/. The clinical labortary codes and rates can be located at https://www.cms.gov/apps/ama/license.asp?file=/ClinicalLabFeeSched/Downloads/16CLAB.zip. Rates are incorported into the program's Bundled Payment System (BPS). Codes are provided to show what services are covered through WWC Clinical Services and to aid in negotiating subcontracts. Reimbursement for treatment services is not allowed.

WWC clinical services 2016 CPT CODE LIST

2.	published by Medicare. While the use of 993XX-series codes may be necessary in some programs, the 993XX Preventive Medicine I	Evaluation v	risits themselves are	e not appropriate for	the NBCCEDP 9	9938X codes shall		
_	be reimbursed at or below the 99203 rate, and 9939X codes shall be reimbursed at or below the 99213 rate.							
3	Medicare's methodology for the payment of anesthesia services are outlined in the Medicare Claims Processing Manual, Chapter 12, pages 99-107, available here: http://www.cms.hhs.gov/manuals/downloads/clm104c12.pdf The carrier-specific Medicare anesthesia 2014 conversion rates are available here: http://www.cms.gov/Center/Provider-Type/Anesthesiologists-Center.html?redirect=/center/anesth.asp. The current rate is \$22.67							
	(Medicare Base Units = 3).							
4	HPV DNA testing is a reimbursable procedure if used for screening in conjunction with Pap testing or for follow-up of an abnormal Pap result or surveillance as per ASCCP guidelines. It is not reimbursable as a primary screening test for women of all ages or as an adjunctive screening test to the Pap for women under 30 years of age. Providers should specify the high-risk HPV DNA panel only. Reimbursement of screening for low-risk HPV types is not permitted. The CDC will allow for reimbursement of Cervista HPV HR at the same rate as the Digene Hybrid-Capture 2 HPV DNA Assay. CDC funds cannot be used for reimbursement of genotyping-(e.g., Cervista HPV 16/18). CDC funds may be used for reimbursement of HPV genotyping.							
5	A LEEP or conization of the cervix, as a diagnostic procedure, may be reimbursed based on ASCCP recommendations. Grantees are strongly encouraged to develop policies to closely monitor these procedures and should pre-authorize this service for reimbursement by having it medical advisory board or designated clinical representative(s) review these cases in advance, and on an individual basis.							
6	This charge should be used with caution to ensure that programs do not reimburse for supplies, the cost of which, has already been accounted for in another clinical charge.							
7	Breast MRI can be reimbursed by the NBCCEDP in conjunction with a mammogram when a client has a BRCA mutation, a first-degree relative who is a BRCA carrier, or a lifetime risk of 20-25% or greater as defined by risk assessment models such as BRCAPRO that are largely dependent on family history. Breast MRI can also be used to better assess areas of concern on a mammogram or for evaluation of a client with a past history of breast cancer after completing treatment. Breast MRI should never be done alone as a breast cancer screening tool. Breast MRI cannot be reimbursed for by the NBCCEDP to assess the extent of disease in a women who is already diagnosed with breast cancer.							
8	Codes 19081-19086 are to be used for breast biopsies that include image guidance, placement of localization device, and imaging of specimen. These codes should not be used in conjunction with 19281-19288.							
9	Codes 19281-19288 are for image guidance placement of localization device without image-guided biopsy. These codes should not be used in conjunction with 19081-19086.							
10	These procedures may be reimbursed at their own Medicare rates. They no longer have to be reimbursed at the 88142 rate.							
11	For a bilateral breast ultrasound, a modifier 50 should be added to either 76641 or 76642 to indicate a bilateral procedure. The 2015 Medicare Physician Fee Schedule assigns a "1" bilateral indicator to both CPT codes 76641 and 76642 which means that Medicare will allow 150 percent of the standard reimbursement rate. There should not be two CPT codes billed if a bilateral ultrasound exam is needed.							
12	Providers should use 88341 and 88342 for immunohistochemistry. CPT codes 88343, G0461 and G0462 were deleted in 2015.
